

SOFTWARE DEVELOPMENT SERVICES AGREEMENT

Agreement No.: MTS-2026-001 Date: June 15, 2026

PARTIES

Client

- Company Name: Motise Inc
- Company Type: C Corporation
- Registered Address: 8 The Green STE R, Dover, Kent, Delaware 19901, USA
- Signatory: Chiang Ching-Hsuan (Founder / Director)
- Company Email: hello@motise.net
- Authorized Project Communication Representative: Chiang Ching-Hsuan (cchiang1124@gmail.com)

The Client designates Chiang Ching-Hsuan as the authorized communication representative for this project, representing the Client in daily project communications, requirement confirmations, and submitting written objections. Written confirmations from the aforementioned representative shall have equal binding force on the Client. Any change of representative must be notified to the Developer in writing by the Client via the company email (@motise.net).

Developer

- Name: HUANG CONG REN
- Nationality: Republic of China (Taiwan)
- Contact Email: tzuchi Huang0214@gmail.com

Both parties agree to cooperate on the software development services specified in this Agreement subject to the terms and conditions herein.

AGREEMENT APPENDICES

This Agreement includes the following appendices, each of which has the same legal effect as the main text of this Agreement:

Appendix	Name	Description
----------	------	-------------

Appendix	Name	Description
Appendix A	Project Scope and Technical Specification	List of functional modules, technical architecture, and resources to be provided by the Client
Appendix B	Development Schedule	Key milestones, prerequisites, and explanation of delay clauses
Appendix C	Acceptance Criteria	Three-track acceptance standards and acceptance checklist
Appendix D	Long-Term Cooperation Framework Agreement	Project-based renewal, four-cycle outsourcing obligation, and difference make-up mechanism

ARTICLE 1 | PROJECT SCOPE

1.1 The Developer agrees to develop version 1.0 of the course booking mobile application (hereinafter referred to as the "System") for the Client, according to the scope specified in Appendix A "Project Scope and Technical Specification."

1.2 The v1.0 development scope shall be subject to the functional items and their technical specifications explicitly listed in Section A-3 of Appendix A. **Only the items explicitly listed in A-3 fall within the v1.0 development scope;** the other sections of Appendix A (the system module list, technical architecture, etc.) are auxiliary descriptions and do not expand the functional scope defined in A-3.

1.3 Any function, item, or requirement not explicitly listed in Section A-3 of Appendix A is excluded from the v1.0 development scope, and both parties shall separately evaluate whether to include it in a subsequent Statement of Work (SOW) or a future version, with separate quotation and scheduling. Any changes to the scope must be confirmed in writing by both parties before taking effect and will require a separate evaluation of their impact on the schedule and fees.

1.4 Privacy Policy and Terms of Service Template and Compliance Disclaimer: Before the end of Track A, the Developer shall provide a basic English template of the Privacy Policy and Terms of Service complying with general US regulatory compliance frameworks (GDPR, CCPA basic frameworks) for the Client's confirmation; the Client shall confirm or provide modifications within 3 working days, and failure to reply within the time limit shall be deemed confirmation, whereupon the Developer may directly embed, deploy, and link it in the corresponding sections of the Landing Page and the App. The template serves only as a basic reference for technical integration; the Client is solely responsible for confirming its final legal compliance, applicability, and completeness, and the Developer shall not bear any legal compliance responsibility arising from the content of these texts; the Client's confirmation of

the content is deemed as having conducted its own review and assuming compliance responsibility.

ARTICLE 2 | SCHEDULE AND MILESTONES

2.1 The development schedule of the System shall be executed according to Appendix B "Development Schedule," which is expected to commence on **June 16, 2026**, with a target delivery date of **August 11, 2026**. The aforementioned target delivery date is a milestone planning target; the Track C acceptance period is calculated independently from the commencement date defined in Clause 4.7 and may extend beyond such target delivery date. The acceptance and correction procedures conducted during such period shall not constitute the Developer's overdue performance or delayed delivery.

2.2 All timelines in Appendix B are contingent upon the Client providing all necessary resources listed in Section A-5 of Appendix A by **June 16, 2026**. For every week of delay in providing the resources, the milestones and delivery dates shall be proportionally postponed.

2.3 **Circumstances Not Counted as Developer Delay:** The following circumstances shall not be counted towards the Developer's delay liability, nor shall they trigger the delay compensation under Article 6: App Store / Google Play review and platform rejection waiting periods; the Client's failure to provide necessary resources, accounts, or access permissions on time; delays in payment functions caused by the failure to complete Stripe KYC verification on time; postponement of submission dates caused by Apple Developer Organization Account D-U-N-S Number issuance delays; and force majeure events (natural disasters, sudden changes in platform policies, etc.). The Stripe account KYC must be completed by the Client personally (due to legal requirements, the Developer cannot act on their behalf); its application deadline and postponement effect shall be handled in accordance with Section A-5 of Appendix A.

ARTICLE 3 | ACCEPTANCE MECHANISM

3.1 The acceptance of the System will be conducted in three tracks according to Appendix C "Acceptance Criteria," and the acceptance standards for each track shall be subject to the provisions in Appendix C.

3.2 Upon the expiration of the acceptance period for each track, if the Client fails to submit written acceptance results, the Developer shall issue a reminder notice; if the Client still fails to submit written acceptance results more than 3 working days after the reminder is delivered, all items in that track shall be deemed to have passed acceptance.

3.3 If the Client does not raise written objections within 48 hours after the weekly sync meeting,

it shall be deemed a confirmation of the progress at that stage, and objections cannot be raised again during subsequent acceptances.

3.4 Once a track is accepted, the items in that track are locked and cannot be objected to again during subsequent tracks or at the time of formal delivery.

3.5 New requirements raised during the acceptance period will not be included in the current acceptance scope and will enter the development of the next version after a separate quotation assessment.

3.6 Invalidity of Subjective Rejection: Any rejection or non-acceptance feedback raised by the Client must be accompanied by a clear explanation of functional issues or specific evidence of non-conformity with the mutually confirmed design specifications. Rejections based on subjective descriptions (such as "it feels wrong" or "the experience is not smooth") shall be deemed invalid, and the items will still be considered accepted.

3.6 .1 Objective Determination of Performance Disputes: If a dispute involves system performance (such as page load time, list scrolling smoothness, API response time, etc.), and the data measured by both parties on TestFlight or an equivalent testing environment, under the testing prerequisites set out in Section A-3-10 of Appendix A, fails to meet the performance baseline specified in that section, it shall be deemed a functional issue and handled under the re-inspection mechanism of Section 3.7. Optimization requests that do not fall below the A-3-10 baseline of Appendix A, or subjective experience descriptions without a basis in the appendix specifications, shall still be subject to the principle of invalidity of subjective rejection under this Section (3.6) and shall not give rise to a valid rejection; the Developer shall, in good faith, assess whether to optimize such requests but is under no obligation to implement them. The Client may, before the signing of this Agreement, submit in writing reasonable commercial-standard acceptance items (such as specific verifiable standards for particular UI/UX interactions, animations, or visual presentation); after discussion and written agreement by both parties, these shall be incorporated into the Appendix A specifications or the Appendix C acceptance items, forming part of the aforementioned "basis in the appendix specifications." Items not incorporated through this procedure after signing shall not constitute independent acceptance standards.

3.7 Re-inspection Limits and Timeframes: Regarding the list of written modification requests submitted by the Client during the acceptance period, after the Developer completes the modifications, the Client may only perform a re-inspection on the results of the modifications for the items originally listed. The Client may not raise new modification requests outside the original list or repeatedly find fault during the re-inspection. The re-inspection period is limited to 3 working days; upon the expiration of the re-inspection period, if the Client fails to submit re-inspection results, the Developer shall issue a reminder notice, and if the Client still fails to

submit re-inspection results more than 3 working days after the reminder is delivered, all items in the list shall be deemed to have passed re-inspection.

3.7 .1 Regression Bug: If the code changes made by the Developer to correct items in the current acceptance list directly cause new functional errors in other items within the same acceptance list or in existing functions of items that have previously passed acceptance (subject to the standards of Section 3.6, with a clear explanation of the functional issue), the Client may raise them during the re-inspection period together, free from the restriction of Section 3.7 "no new suggestions outside the original list" and without constituting a violation of Track Locking under Section 3.4. The Developer shall correct them together; for the additional correction time required, the re-inspection period for that specific item may be extended by 3 working days, and the re-inspection period for other items shall not be affected. The re-inspection of regression bugs is strictly limited to confirming that the defect has been corrected, and no other new suggestions may be derived and proposed.

3.8 Weekly Sync Meeting: Both parties shall, in principle, hold an online sync meeting every Friday from 24:00 to 01:00 of the following day (Saturday) (Taiwan Time, UTC+8; corresponding to Friday 09:00–10:00 AM US Pacific Time) to synchronize project progress. If either party cannot attend the meeting at the specified time, they shall notify the other party in advance and coordinate a rescheduled time, but a sync meeting must still be completed within that week.

ARTICLE 4 | FEES AND PAYMENT

4.1 The fees for this Agreement are calculated based on the cooperation scenario confirmed by both parties and shall be paid in three installments:

Scenario 1: Full Acceptance + Confirmation of Long-Term Cooperation (Total Fee \$1,800 USD) (Long-Term Cooperation Service Period: 12 months, from August 11, 2026 to August 11, 2027)

Installment	Timing	Amount
First Installment (30%)	Upon signing	\$540 USD
Second Installment (30%)	Within 3 working days after full acceptance of Track B	\$540 USD
Third Installment (40%)	Within 3 working days after full acceptance of Track C and formal delivery	\$720 USD

Scenario 2: Full Acceptance + Clear Decision Not to Continue Cooperation (Total Fee \$2,499 USD)

Installment	Timing	Amount
First Installment (30%)	Upon signing	\$540 USD
Second Installment (30%)	Within 3 working days after full acceptance of Track B	\$540 USD
Third Installment	Within 3 working days after full acceptance of Track C and formal delivery	Make up the difference to \$2,499 (\$1,419 USD)

Scenario 3: Delayed Development Schedule and Failure to Pass Full Acceptance

The fee is calculated based on \$2,499 USD, with deductions made according to the delay compensation clause in Article 6.

4.2 Method of Scenario Determination: Whether Scenario 1 is established shall be subject to the time when this Agreement is electronically signed by both parties: if Appendix D "Long-Term Cooperation Framework Agreement" has been signed in writing by both parties at that time, Scenario 1 shall be deemed established, and the third installment payment shall be calculated based on the Scenario 1 amount (\$720 USD). If Appendix D has not been signed in writing by both parties when this Agreement is electronically signed, it will automatically be calculated as Scenario 2, and the third installment payment shall make up the difference to \$2,499 USD, and Appendix D shall be deemed invalid.

4.3 Definition of Long-Term Cooperation: "Confirmation of long-term cooperation" refers to the project-based renewal method agreed upon by both parties under Appendix D "Long-Term Cooperation Framework Agreement," where the written signing of Appendix D is completed before the deadline for scenario confirmation. The specific scope, compensation, and terms of long-term cooperation shall be subject to Appendix D and subsequent individual Statements of Work (SOW).

4.4 Tax Clause: All amounts are net of taxes (USD). The Developer will provide a W-8BEN form. Upon receipt, the Client shall not deduct US Withholding Tax from the payments under this Agreement.

4.5 Remittance Clause: Payments shall be made in US Dollars (USD) to the Wise account designated by the Developer. Any remittance or handling fees charged to the Client by its own correspondent bank for remitting these payments shall be borne by the Client; any fees incurred at the Developer's receiving account (Wise) end shall be borne by the Developer. If, due to deductions by intermediary banks or other fees not directly charged by each party's own bank, the amount actually received by the Developer is less than the agreed amount for each installment, the Client shall make up the difference together with the nearest subsequent payment; if that installment is already the final payment, the Client shall make up the

difference using the original payment method within 3 working days after the Developer issues a written notice.

4.6 Publishing Fees: App Store publishing fees (Apple Developer Program annual fee \$99 USD, Google Play one-time fee \$25 USD) shall be borne by the Client and are not included in the development fees of this Agreement.

4.7 Start of Acceptance from Delivery Testing: For Track C acceptance, the acceptance period begins when the Developer submits the App to TestFlight/Firebase Distribution for delivery testing, or when it passes platform (App Store / Google Play) review. If the App cannot be officially released due to non-developer reasons, such as the Client failing to provide accounts, platform policy changes, or the Client's subjective decision to suspend the launch, it will not affect the progress of Track C acceptance, which will still be calculated as 14 working days from the date of delivery testing or passing the review.

4.7 .1 Platform Review Buffer: If the App cannot be officially published on the App Store or Google Play due to reasons not attributable to the Developer (limited to: Client failing to provide a valid Apple / Google Developer account in a timely manner, Client explicitly requesting to postpone launch, or platform rejection not caused by defects in the App code), a buffer period of 14 working days for review and platform communication will be given starting from the date the Developer delivers the complete TestFlight (or equivalent testing environment) and submits it for review to both platforms. During the buffer period, if the App is rejected by the platform due to App code defects or technical non-compliance with the specifications of Appendix A, the Developer shall correct it free of charge and resubmit it, and the buffer period shall not be recalculated.

4.7 .2 Criteria for Passing Acceptance and Triggering Payment: Track C acceptance shall be established upon the earliest occurrence of any of the following circumstances, which shall serve as the starting date for the 3-working-day payment instruction for the third installment:

- The App completes official launch on both iOS and Android platforms;
- Both parties hold an online acceptance meeting, complete real-device functional testing for the Track C items in Appendix C, and confirm approval. The payment instruction shall be issued on the day of the meeting or within the next working day;
- From the day following the expiration of the buffer period mentioned in the preceding section, the acceptance period calculated in accordance with Section 3.2 (including the reminder procedure) expires, and the Client does not raise written objections, which shall be deemed as passing acceptance.

4.7 .3 Code Defect Warranty: If the Client has paid the final installment, and the App's subsequent official re-launch process is functionally rejected (Functional Rejection) by the platforms because the source code delivered this time contains a "problem outside the acceptance scope," the Developer is still obligated to fix the code free of charge until review

approval. This warranty obligation is valid within 60 calendar days after the final payment is made. Bugs or crashes affecting the normal operation of the core functions set out in Appendix A shall, in accordance with the acceptance standards of Article 3 (including the "fully functional and operational" requirement of Section 3.6), be fixed before each track passes acceptance; such issues discovered after formal delivery acceptance is completed shall be handled under the maintenance services of Section D-5.6 of Appendix D and shall not be subject to the free warranty under this Section.

4.7 .4 Platform Policy Changes: If, before the formal delivery acceptance of the project is completed, a functional rejection occurs due to a sudden and major change in platform policies, and such change involves the code logic of the core functions of this project, the Developer agrees to evaluate the feasibility of modifications and actively cooperate. For modifications taking 12 hours or less, the Developer will assist free of charge; for the portion exceeding 12 hours, or for platform policy changes occurring after the formal delivery acceptance is completed, both parties shall separately negotiate reasonable compensation and extended development and acceptance schedules.

4.8 Overdue Payment and Service Suspension: If the Client fails to pay the full amount for more than 7 calendar days after the payment timing for each installment has arrived, the Developer has the right to suspend all subsequent development, review submission, launch, maintenance, consultation, or ownership transfer services. The Client shall pay a late fee on the unpaid amount at a monthly interest rate of one percent (1%, annual rate of 12%) starting from the date of overdue, with portions of a month calculated proportionally on a daily basis.

4.8 .1 No Interest for Remittance in Transit: If, before the payment deadline of each installment expires, the Client has actually initiated the remittance and provides verifiable proof of remittance (such as a Wise/bank transfer receipt, SWIFT message, or equivalent voucher), then the period of delay in actual receipt caused by international remittance clearing, inter-bank processing, or force majeure shall not be counted toward the overdue days under Section 4.8, nor shall a late fee accrue; the same applies to the overdue days under Section 4.9. However, the amount must actually be received in full within a reasonable period; if the proof provided is false, is subsequently cancelled or reversed, or the amount is ultimately not actually received, the overdue days and late fee under Section 4.8 shall be calculated retroactively from the day following the expiry of the original payment deadline. The determination of overdue status and the application of the interest exemption under this Subsection shall be made by the Developer based on the proof of remittance and the actual receipt.

4.9 Consequences of Overdue Payment: If the Client's payment is overdue for 21 calendar days, the Client shall be deemed to have terminated this Agreement early under Section 5.9, and both parties shall calculate the Amount Due on Termination Date according to the termination settlement formula under Section 5.9 and proceed with settlement; the overdue and unsettled

amount shall accrue a late fee under Section 4.8 from the date of overdue until actual settlement. From the date of the aforementioned deemed termination until the Amount Due on Termination Date is actually settled, the Developer may suspend its maintenance obligations for the Repository and all subsequent development, review submission, and launch work, but shall not remove its own existing Admin permissions, shut down or damage the launched AWS Production environment, nor delete existing data; any dispute arising from this Section shall be resolved by both parties through commercial negotiation or judicial channels.

ARTICLE 5 | INTELLECTUAL PROPERTY, CODE HANDOVER AND TERMINATION

5.1 The intellectual property rights of this project shall be transferred in stages according to the development milestones and payment progress, and the transfer conditions for each stage are as follows:

- Upon full receipt of the first installment payment (\$540 USD), the intellectual property rights of all deliverables and codes corresponding to Track A shall be automatically transferred to the Client (Motise Inc.).
- Upon full receipt of the second installment payment (\$540 USD), the intellectual property rights of all deliverables and codes corresponding to Track B shall be automatically transferred to the Client (Motise Inc.).
- Upon full receipt of the third installment payment, the intellectual property rights of all deliverables and codes corresponding to Track C shall be automatically transferred to the Client (Motise Inc.).

5.2 Prior to the receipt of the payment for each stage, the intellectual property rights of the deliverables and codes corresponding to that track shall remain with the Developer. The Client shall obtain an exclusive, non-transferable license to use such deliverables during that stage solely for internal business operations, but shall not claim ownership, sub-license, or transfer them to a third party.

5.3 **Governing Law Note:** This Agreement is governed by the laws of the Republic of China (Taiwan). The concept of "Work Made for Hire" under US copyright law does not apply to this Agreement. The transfer of intellectual property rights shall automatically take effect by way of assignment upon receipt of each installment payment under Section 5.1 of this Article, in compliance with the Copyright Act of the Republic of China.

5.4 The GitHub Repository shall be established under the Client's account (or an organization designated by the Client), and the Developer shall join as a Collaborator and obtain Admin permissions to facilitate development operations such as branch protection rules, CI/CD workflow settings, and key and permission management for third-party services (e.g., Stripe, Firebase).

5.4 .1 Prior to passing the acceptance of this project and settling the final payment, except through Section 5.9, Section 5.9.1, Section 5.4.2 of this Section, or other formal termination procedures of this Agreement:

- The Client shall not restrict or remove the Developer's Admin permissions; nor shall the Developer use Admin permissions to restrict the Client's access permissions, or perform acts that affect the project progress such as deleting or transferring the Repository.

5.4 .2 **Emergency Exception:** Where the Client, for legitimate reasons of information security or intellectual property protection, reasonably suspects that the Developer has engaged in acts such as deleting production environment data or implanting malicious code or backdoors not confirmed by both parties, the Client may, by written notice to the Developer accompanied by the specific technical evidence relied upon (such as version control records, server access logs, abnormal operation records, etc.), temporarily restrict the Developer's relevant access permissions. Both parties shall jointly review the aforementioned evidence within 3 working days after the notice is delivered.

- If, after review, the accusation is found to be unfounded (misjudgment), the Client shall immediately restore the Developer's original permissions. The development, acceptance, and payment schedules affected by the aforementioned permission restriction shall be postponed after reassessment by the Developer, and the Client shall not object. In this case, neither party shall bear any liability for breach, nor shall the termination procedures of Section 5.9 or Section 5.9.1 be triggered.
- If the accusation is established, it shall be handled in accordance with the termination procedure of Section 5.9 or Section 5.9.1 of this Agreement (as applicable).
- When the Client restricts the Developer's relevant access permissions, it must provide written notice and attach specific technical evidence in accordance with this Section; if the Client restricts or removes the Developer's permissions without providing the written notice (and attaching specific technical evidence) required under this Section, the Client shall be deemed to have terminated this Agreement early under Section 5.9, and the Amount Due on Termination Date shall be calculated according to the termination settlement formula under Section 5.9 and settled accordingly.
- Local code backups, version control copies, or mirror backups retained by the Developer for routine development do not constitute a basis of evidence for the malicious acts referred to in this Section.

5.5 The transfer of access and ownership to the AWS Production environment will be handed over to the Client within 3 working days after the settlement of the third installment, and the Developer has an obligation to assist in completing the transfer settings.

5.6 Third-party service accounts (Stripe, Firebase, Apple Developer, Google Play) used during development are inherently registered under the Client's name, and their ownership will not be affected by this Article.

5.7 Technical documentation (including but not limited to deployment guides and system architecture description documents, with detailed specifications subject to Section A-3-9 of Appendix A) shall be submitted concurrently with the acceptance of each track according to the

corresponding acceptance items listed in Appendix C (A-11, B-23, C-09) and completely handed over upon formal delivery; its acceptance shall be handled in accordance with the mechanism specified in Article 3 (including Sections 3.4, 3.6, and 3.7).

5.8 Remedies for Breach: If the Client commits a material breach by failing to make payments as agreed and fails to cure such breach within seven (7) calendar days after written notice from the Developer, the Developer shall have the right to: (1) suspend development work for the current and subsequent stages; (2) suspend delivery of the latest development progress; and (3) seek damages from the Client in accordance with the law. The exercise of the aforementioned rights shall not affect the validity of the transfer of intellectual property rights corresponding to the payments already received.

5.9 Termination for Convenience: Either party may terminate this Agreement at any time, for any reason or no reason, upon 14 calendar days' prior written notice to the other party. Upon termination, the Client shall pay the "Amount Due on Termination Date," calculated as follows:

$$\begin{aligned} &\text{Amount Due on Termination Date} \\ &= \text{Total Fee of Applicable Scenario} \\ &\quad \times (\text{Number of Acceptance Items Passed as of Termination Date} \div \text{Total Number of Acceptance} \\ &\quad \text{Items in Appendix C}) \\ &\quad - \text{Amount Paid} \end{aligned}$$

Upon receipt of the aforementioned Amount Due on Termination Date, the Developer shall, within 1 working day, deliver the work results completed as of the termination date to the Client by transferring Repository ownership or granting full access rights. If the calculation of the Amount Due on Termination Date results in zero or a negative number, the Developer is not required to refund any fees received and shall complete the delivery within 1 working day after confirmation. During the notice period, the Developer is under no obligation to develop new features. Before the Amount Due on Termination Date is settled, the intellectual property rights of the corresponding code shall not be transferred.

5.9 .1 Client's Accelerated Right of Termination (For Cause Attributable to Developer): Upon the occurrence of any of the following objective circumstances, the Client may waive the prior notice period under the preceding section and immediately terminate this Agreement by written notice to the Developer, which shall terminate on the date of delivery of such notice; the termination settlement amount shall still be calculated according to the formula under Section 5.9:

- Any acceptance item in Appendix C remains incomplete more than 7 working days beyond the completion deadline agreed for the track to which the item belongs under the Appendix B schedule, and the Developer has not provided a reasonable written explanation at least 3 working days before the item's scheduled completion date; or

- The Developer completely fails to respond to the Client's contact regarding project-related matters (including written communication channels such as Email, instant messaging, etc.) for 5 consecutive working days without a reasonable explanation or force majeure afterward.

5.10 Originality Warranty: The Developer warrants that the delivered code is original, does not infringe upon any third-party intellectual property rights, and is free of any liens or encumbrances.

ARTICLE 6 | DELAY COMPENSATION

6.1 If the completion of features is delayed by more than **14 calendar days** beyond the milestone timeline due to **reasons attributable to the Developer**, the Client may claim compensation according to the following formula:

Compensation Amount = Amount Paid × (Number of Uncompleted Acceptance Items ÷ Total Number of Acceptance Items) × 50%
Compensation Cap = 20% of the Amount Paid

6.2 Compensation is calculated solely at the time of formal delivery acceptance for Track C and does not accumulate track by track.

6.3 The following circumstances shall not be included in the Developer's delay calculation and will not trigger compensation under this Article:

- App Store / Google Play review waiting periods or platform rejection periods
- Delays caused by the Client's failure to provide necessary resources, accounts, or access permissions on time
- Delays in payment functions caused by the failure to complete Stripe KYC verification on time
- Delays in submission dates caused by Apple Developer Organization Account D-U-N-S Number issuance delays
- Force majeure events

6.4 Relationship with Termination Clauses: For the same delay event, the Client may not simultaneously terminate this Agreement under Clause 5.9 or Clause 5.9.1 and claim delay compensation under this Article; the Client must elect one. If the Client elects to terminate under Clause 5.9 / 5.9.1, the termination settlement shall be handled under the formula of Clause 5.9, and no compensation under this Article shall be additionally calculated; if the Client elects to claim compensation under this Article and continue performance, the Client may not separately assert accelerated termination for the same event.

ARTICLE 7 | CONFIDENTIALITY OBLIGATIONS

7.1 Both parties bear confidentiality obligations regarding the business logic, user data structure, system architecture, financial information, and other project-related confidential information learned during the cooperation period.

7.2 The confidentiality obligation remains fully effective after the termination or expiration of this Agreement, with no time limit.

7.3 The following information is not bound by the confidentiality obligations in this Article:

- Information that was already public before exposure
- Information legally provided by a third party without confidentiality obligations
- Information required to be disclosed by law or orders from competent authorities

ARTICLE 8 | GENERAL PROVISIONS

8.1 **Governing Law:** This Agreement is governed by the laws of the Republic of China (Taiwan).

8.2 **Dispute Resolution:** Any disputes arising between the parties regarding this Agreement shall primarily be resolved through amicable negotiation. If negotiations fail, both parties agree to submit to the jurisdiction of the courts of Taiwan, Republic of China, as the court of first instance.

8.3 **Document Validity and Order of Precedence:** The main text of this Agreement and Appendix A, Appendix B, Appendix C, and Appendix D jointly constitute the complete basis for cooperation between both parties and have equal legal effect. If there is a conflict between the documents, the provisions in the main text of this Agreement shall prevail.

8.4 **Amendment Clause:** Any amendment to this Agreement must be agreed upon in writing by both parties before taking effect; oral agreements are invalid.

8.5 **Severability:** If any provision of this Agreement is determined to be invalid or unenforceable, it shall not affect the validity of the remaining provisions.

8.6 **Entire Agreement:** This Agreement supersedes all prior oral or written communications and agreements between both parties regarding this project.

8.7 **Definition of Time Periods:** As used in this Agreement and all Appendices, "working day" means a banking business day in the Republic of China (Taiwan), excluding Saturdays, Sundays, and Taiwan public holidays; "calendar day" means a continuous calendar day, including weekends and holidays.

ARTICLE 9 | SIGNATURE

Both parties have read and understood all the terms of this Agreement and the contents of all appendices and agree to be bound by them.

9.1 Method of Signing: This Agreement is signed electronically via the Dropbox Sign platform. The signing invitation for the Client is sent to the company email (hello@motise.net) and must be completed by the signatory Chiang Ching-Hsuan personally. An electronic signature received and completed via the company email has the same legal effect as a handwritten signature.

9.2 Time of Signing Completion: After both parties have completed the electronic signatures, the timestamps and signing records automatically generated by the Dropbox Sign system shall serve as evidence of the entry into force of this Agreement.

Client

Company Name: Motise Inc

Signatory: Chiang Ching-Hsuan (Founder / Director)

Signing Email: hello@motise.net

Electronic Signature Timestamp:

Developer

Name: HUANG CONG REN

Contact Email: tzuchi Huang0214@gmail.com

Electronic Signature Timestamp:

This Agreement, together with Appendix A, Appendix B, Appendix C, and Appendix D, consists of five documents. Both parties shall each hold one electronic copy, which shall have equal validity.

Appendix A | Project Scope and Technical Specification

Agreement No.: MTS-2026-001 Date: June 15, 2026

Parties: Motise Inc (Client) / HUANG CONG REN (Developer)

A-1 Project Overview

This document defines the development scope, functional modules, and technical specifications for version 1.0 of the "Course Booking Mobile Application" (hereinafter referred to as the "System"), serving as the technical basis for cooperation between both parties.

Scope Definition: Only the functional items and their technical specifications explicitly listed in Section A-3 of this Appendix fall within the v1.0 development scope. Any function, item, or requirement not explicitly listed in A-3 is excluded from this development scope, and both parties shall separately evaluate whether to include it in a subsequent Statement of Work (SOW) or a future version, with separate quotation and scheduling. Other sections (the system module list, technical architecture, etc.) are auxiliary descriptions and do not expand the functional scope defined in A-3.

A-2 System Module List

All the following modules are included in the development scope of v1.0.

No.	Module Name	Description	Platform
M-01	Student App Interface	Course browsing, booking, online payment, QR Code check-in, push notification reception	iOS • Android
M-02	Teacher App Interface	Assigned course viewing, student list management, QR Code scanning for attendance verification	iOS • Android
M-03	Web-based Admin Panel	Course management, member management, order inquiry, attendance record inquiry	Web
M-04	Account Authentication	Email registration/login, Google OAuth, Apple Sign-In, mobile number binding	All Platforms

No.	Module Name	Description	Platform
M-05	Online Payment Integration	Stripe Payment Intent, Webhook order status sync, payment failure handling, duplicate payment prevention	App • Web
M-06	Push Notifications	Firebase FCM course reminders (24 hours and 1 hour before start), rush booking alerts	App
M-07	Infrastructure	AWS Lightsail Node.js Instance, PostgreSQL Managed Database, Object Storage	Cloud
M-08	Company Website Landing Page	Single-page Motise Inc website, deployed at motise.net, serving as a prerequisite for Apple Developer organization account approval	Web

A-3 v1.0 Detailed Functions

A-3-1 Accounts and Roles

- Supports three login methods: Email / Password, Google OAuth, Apple Sign-In (including Face ID / Touch ID).
- Supports independent mobile number binding (not a login method, functions as additional account info).
- System roles are divided into three levels: Student, Teacher, and Admin.
- API access permissions for each role are independent; cross-role access returns a 403 error.

A-3-2 Course Features

- Course list display: Name, time, price, remaining slots; unlisted courses are not displayed.
- Course detail page: Full description, location, quota, instructor name, and personal introduction.
- Slot locking: Slot updates use database atomic operations (such as pessimistic locking or atomic decrement) to ensure concurrent bookings do not exceed capacity; the booking button is disabled when full.
- Booking deadline: The booking button automatically closes after the deadline has passed.
- Flash Sale: A course may be configured with a sale start time and end time, and can only be booked within that time window; the booking button closes when full, sharing the same slot-locking mechanism as regular courses.
- Slot release: If a user creates an order but does not complete payment within 10 minutes, the system automatically releases the slot they occupied for other users to book.
- Oversell prevention and data consistency: Slot changes (deduction, release) are guaranteed based on database transaction-level locking / atomic operations, ensuring the displayed and actual inventory

are consistent; if, after launch, the traffic scale requires an additional caching layer (such as Redis) to improve read performance, this is a technical implementation option to be separately evaluated and introduced as actually needed under the Appendix D long-term collaboration framework, and does not affect the oversell prevention guarantee set out in this section.

- Cancellation policy (Class Pass mechanism):
 - Cancellation is allowed more than 24 hours before the course starts, upon which the system automatically releases the slot, issues no refund, and instead grants a Class Pass; cancellation is not allowed within 24 hours before the course starts.
 - A Class Pass is applicable to all courses; the credit value of one Class Pass equals the original purchase amount of the cancelled course.
 - A Class Pass is non-transferable; the same account may hold multiple Class Passes simultaneously.
 - Cancellation limit: Each account is limited to a maximum of 3 "cancellations made more than 24 hours in advance" per month (30 days); the same Class Pass (i.e., the credit issued from a cancellation) cannot be cancelled again.
 - A Class Pass is valid for 1 month (30 days) from the date of issuance; it expires if unused, with no remedy or extension mechanism.
- My Courses page: Three categories: Booked, Purchased, and History.

A-3-3 Payment Process

- Create payment requests via Stripe Payment Intent.
- Order status uses the Stripe Webhook as the sole basis for updates, and Webhook events are processed idempotently: even if the user disconnects immediately after completing payment, the backend can still correctly update the order status, deduct the slot, and generate the QR Code; after the user reconnects, the generated ticket is properly displayed in "My Courses."
- Display clear error messages upon payment failure; course will not be unlocked.
- Purchased courses will not show the purchase button to prevent duplicate payments.
- Display cancellation policy terms before purchase; users must check to agree before making payment.

A-3-4 QR Code Check-in

- Students who have booked can view and present their unique QR Code from the course card.
- QR Code is bound to the student's account and the course; it automatically expires 15 minutes after the course starts.
- The teacher interface provides a camera scanning entrance; scanning displays student name, course info, and attendance status.
- Scanning an already verified QR Code will display "Already Checked-in" and will not double-count.
- Scanning an invalid or expired QR Code displays a clear error message.

A-3-5 Admin Panel (Web-based)

- Course management: Add, modify, list, unlist; listed courses appear instantly on the front end.
- Member management: Query members, assign or remove teacher roles, deactivate accounts.
- Order inquiry: Student name, course name, payment status, amount.
- Attendance records: Attendance lists and check-in statuses for each course.

A-3-6 Push Notifications

- Course reminders: Sent 24 hours and 1 hour before the start of a booked course.
- Rush booking alerts: Users can set rush alerts for specific courses and receive a push notification before booking opens.
- Users can customize whether to turn on various types of push notifications.

A-3-7 Company Website Landing Page (M-08)

- Deployed on the Client's existing domain, motise.net.
- Content includes: Company name, brief introduction, service description, contact information.
- Layout design and presentation are determined by the Developer, aiming to meet Apple Developer organization account review requirements.
- The Client may provide brand assets (Logo, brand color codes (if any); if not provided, the Developer will decide) for the Developer's reference; final presentation is at the Developer's discretion.
- Once completed, it is the final version; subsequent layout or content modifications are excluded from the scope of this Agreement.

A-3-8 Privacy Policy & Terms of Service Templates

- The Developer will provide basic English templates (Basic Templates) of the Privacy Policy and Terms of Service that comply with general US regulatory compliance frameworks (GDPR, CCPA basic frameworks) before the end of Track A.
- The Client shall confirm or provide modifications within 3 working days after receiving the templates; failure to reply within the timeframe will be deemed as confirmation of the original templates, and the Developer may directly use them for embedding and deployment.
- The Client may still request modifications to the **text content** of the Privacy Policy and Terms of Service after the aforementioned confirmation and before embedding and deployment in Track C. The Developer shall assist in updating and deploying such modifications, provided that they do not affect the established schedule of Track C. If the requests involve adding new consent workflows, new types of clauses, or structural changes, they shall be handled as a change of scope in accordance with Section 1.3 of the Main Agreement.
- The Developer is responsible for completely embedding, deploying, and linking the confirmed content in the corresponding sections of the Landing Page and the App.
- The aforementioned templates serve as a reference basis for technical integration purposes, and the Client is solely responsible for confirming final legal compliance. The Client's confirmation of the content is deemed as having conducted its own review and assuming compliance responsibility.

A-3-9 Technical Documentation Delivery Specifications

The Developer shall provide technical documentation in accordance with the following specifications, which shall serve as the content basis for the corresponding acceptance items in Appendix C (A-11, B-23, C-09):

- **Deployment Guide:** Build steps for the local development environment, deployment steps for the backend server (AWS Lightsail), list and explanation of environment variables, configuration methods for third-party services (Stripe, Firebase, etc.), and instructions for the App packaging and publishing process.
- **Architecture Documentation:** Database schema description, API documentation (including key field definitions), and technical architecture and operational logic description for each module (M-01 to M-08) listed in Section A-2 of Appendix A.

The document version shall be consistent with the source code delivered for the corresponding track. Documents updated along with the development progress shall be submitted in versions applicable to the current scope during the acceptance of each track; there is no need to provide the complete version during Tracks A and B. The complete version shall be handed over together during Track C (C-09).

A-3-10 Performance Baseline

The following baselines serve as the basis for the objective determination of performance disputes under Section 3.6.1 of the Main Agreement. The testing environment is TestFlight (or an equivalent testing environment) on general consumer-grade devices (such as iPhone 12 or equivalent or above):

- Course list page scrolling: $FPS \geq 30$
- Cold start load time for main pages (course list, course detail, My Courses): ≤ 3 seconds
- Average response time between the App and the backend API: ≤ 1.5 seconds (excluding the network latency of third-party services such as Stripe and Firebase themselves, and already accounting for reasonable cloud service latency and high-load conditions)

Performance items not listed in this section, or cases where the device/network environment does not meet the above testing prerequisites, are not subject to the objective determination under Section 3.6.1 of the Main Agreement and shall still be handled under the principle of invalidity of subjective rejection in Section 3.6.

A-4 Technical Architecture

A-4-1 System Layers

React Native App

A-4-2 Technology Stack

Technology	Purpose	Rationale
React Native	iOS / Android App	Single codebase supports both platforms, lowering long-term maintenance costs.
Node.js	Backend API and Logic	Unified JavaScript across frontend and backend, lowering hiring barriers for maintenance.
PostgreSQL	Relational Database	Mature and stable; Lightsail provides managed services avoiding manual operations.
AWS Lightsail	Cloud Infrastructure	Fixed monthly fee (approx. \$25 USD/mo), predictable costs.
Stripe	Online Payments	Industry standard, high compliance, mature API.
Firebase FCM	Push Notifications	Supports both iOS / Android, generous free tier.

A-4-3 Core Database Tables

Table	Description
users	User accounts, roles, mobile numbers
courses	Course data, capacity, deadlines, listing status
bookings	Booking records, statuses
orders	Order data, Stripe Payment Intent IDs, payment statuses
attendance	QR Code tokens, verification statuses, check-in times

A-5 Resources Provided by Client

Before Kickoff (By June 16, 2026)

Item	Delivery Method
GitHub Repository Setup	Created under the Client's account (or an organization designated by the Client), inviting the Developer as a Collaborator and granting Admin permissions (see Section 5.4 of the Main Agreement for details).
AWS Lightsail Access	Provide IAM user account or invite as Lightsail Administrator.
Google Play Console Access	Add as Release Manager.
motise.net Domain Access	Provide DNS management access or assist with DNS configuration.

Stripe Account Settings (KYC to be initiated within 3 working days after the first installment payment is received)

Item	Description
Stripe Account API Keys	The Client shall apply for the Stripe account and provide the API keys after completing the KYC verification. The KYC must be completed by the Client personally (due to legal requirements, the Developer cannot act on their behalf), which takes about 3–5 working days for review. The application shall be initiated within 3 working days after the receipt of the first installment payment. If provided late, the acceptance items related to Stripe (A-07 / A-08 in Appendix C) shall be postponed, which will not be considered a delay by the Developer, nor will it trigger the delay compensation clause (for the exemption principle, see Section 2.3 of the Main Agreement).

Before Track B Kickoff (By June 26, 2026)

Item	Delivery Method
Firebase Project Access	Add Developer as Editor in Firebase Console.

Item	Delivery Method
UI/UX Design Source Files	The Client shall provide complete UI/UX design source files (including screen flows and visual specifications) before the kickoff of Track B (2026/06/26). If not provided on time, the Developer may proceed with development based on its own initial interface design, and such initial design shall serve as the interface acceptance baseline for Tracks B/C; the Client may not refuse acceptance or claim a Developer delay on the grounds that the interface appearance differs from designs it subsequently provides. The UI/UX provided by the Client before 2026/06/26 (or the Developer's initial design substituted for it due to late provision) constitutes the interface design freeze for the v1.0 launch (target 2026/08/11) and acceptance; any interface changes after this freeze are not included in the v1.0 scope of this Agreement and shall be deferred to the development period after 2026/08/11, to be separately evaluated, quoted, and scheduled under the scope-change procedure in Section 1.3 of the Main Agreement, within the Appendix D long-term cooperation framework or a separate SOW.

⚠ Disclaimer on Design Source and Intellectual Property: The legality of any UI/UX design source files, reference materials provided by the Client, or third-party website/App interface designs the Client designates for reference, and whether they infringe third-party intellectual property rights, shall be confirmed by and be the responsibility of the Client. If the Client requests the Developer to reference, approximate, or reproduce the interface design of a specific third-party website or App, the Client shall bear any resulting intellectual property disputes and liabilities (including copyright, trademark, trade dress, or unfair competition), and the Developer shall bear **no liability whatsoever** for infringement arising from such design sources. Based on professional judgment, the Developer has the right to refuse to reproduce a design that clearly constitutes infringement and to instead implement an original or sufficiently differentiated design, which shall not be deemed a breach or a reduction of scope.

Landing Page Assets (Provide as soon as possible after first payment)

Item	Description
Brand Assets	Logo, brand color codes (if any); if not provided, Developer will decide.
Company Copy	Company profile, service description, contact info; if not provided, Developer will draft based on review needs.

⚠ Failure to provide Landing Page assets will not affect the development schedule. The

Developer will independently determine content and layout based on review requirements; once completed, it will be the final version.

Before Launch and Submission (Before Track C Kickoff, Target July 10, 2026)

Item	Description
Apple Developer Team Access	Add as App Manager in App Store Connect (Requires organization account to be activated first).
App Icon	1024 × 1024 PNG format.
Privacy Policy URL	Any public URL on motise.net.
Sample Course Data	Used for testing and demonstration.
Test Accounts (5 Sets)	3 Students, 1 Teacher, 1 Admin.

Appendix A has the same legal effect as the Main Agreement (MTS-2026-001). The signing of the Main Agreement by both parties is deemed as confirmation of the contents of this Appendix.

Appendix B | Development Schedule

Agreement No.: MTS-2026-001 Date: June 15, 2026

Parties: Motise Inc (Client) / HUANG CONG REN (Developer)

B-1 Schedule Prerequisites

All timelines in this appendix are contingent upon the full completion of the following conditions by the specified dates:

Prerequisite	Deadline	Note
Client provides all necessary access permissions	2026/06/16	See Appendix A, Section A-5 "Before Kickoff" listed items
motise.net domain access provision	2026/06/16	DNS management access or assistance with DNS configuration, prerequisite for Landing Page deployment
Stripe Account KYC application initiation	Within 3 working days after receipt of first payment	KYC takes 3–5 working days, must be completed by the Client personally, Developer cannot act as a proxy
Apple Developer Organization Account Activation (including D-U-N-S Number issuance)	2026/07/10	Prerequisite for Track C review submission. D-U-N-S issuance takes 5–30 working days, and Apple account review time is outside Developer's control. Submission delays due to issuance delays are not considered Developer's liability.
Google Play Console Organization Account Activation	2026/06/16	Review times for newly established companies vary. Submission delays due to Google review delays are not considered Developer's liability.

⚠ For any delays in prerequisites, milestones and delivery dates will be proportionally postponed, and such delays are not considered the Developer's liability.

B-1-1 Preliminary Work | Landing Page

Nature: Preliminary required work before main development, not attached to any acceptance track. **Purpose:** Ensure motise.net has a complete company information page, acting as a prerequisite for Apple Developer organization account approval.

Item	Timing
Start Time	After the first installment (\$540 USD) is fully received

Item	Timing
Completion Deadline	Within 3 working days after receipt of payment
Acceptance Method	motise.net is browsable, content meets Apple review requirements (See Appendix C P-01)

After the Landing Page is completed, the Client should immediately initiate the Apple Developer organization account application process to minimize overall schedule delays caused by D-U-N-S issuance wait times.

B-2 Key Milestones

No.	Milestone	Target Date	Acceptance Track
M1	Project Kickoff (All access granted)	2026/06/16	—
M2	DB Schema + API Skeleton Complete	2026/06/21	Track A
M3	Auth System Complete	2026/06/23	Track A
M4	Course Features + Stripe Integration Complete	2026/06/30	Track A
M5	QR Code + Push + Admin Panel Complete	2026/07/07	Track B
M6	TestFlight Testing + Bug Fixes Complete	2026/07/13	—
M7	iOS + Android Simultaneous Submission	2026/07/14	—
M8	iOS / Android Official Launch (Target)	2026/07/25	Track C Opens
M9	Formal Project Delivery	2026/08/11	Track C Complete

B-3 Development Track Description

Track A | Backend and Infrastructure (6/16 – 6/30)

Task	Description
Architecture + Env Setup	AWS Lightsail Node.js Instance, PostgreSQL Setup
DB Schema	5 core tables: users, courses, bookings, orders, attendance
Auth System	Email / Google / Apple Sign-In, JWT, Role Permissions (Student / Teacher / Admin)
Course CRUD API	Create, read, update, unlist, capacity, and deadline management
Booking Logic API	Concurrent capacity locking, booking deadline controls
Stripe Integration	Payment Intent creation, Webhook order status updates
QR Code API	Token generation & binding, 15-min expiration, verification API

Track B | Frontend App and Web-based Admin (6/26 – 7/7)

Task	Description
Course List + Detail Page	Listed course display, remaining slots, instructor info
Booking + Purchase Flow	Stripe UI integration, payment failure handling, terms checkbox
QR Code Display + Scan	Student presentation, teacher scanning/verification, expiration alerts
Push Notifications	Firebase FCM course reminders, rush booking alert setup
Web-based Admin	Course listing/unlisting, member management, order inquiry, attendance records

Track C | Testing, Submission, and Launch (7/10 – 8/11)

Task	Description
TestFlight + Firebase Dist	iOS / Android E2E testing
Bug Fixes	Fix issues discovered during testing
App Store Asset Prep	Screenshots, descriptions, Privacy Policy
iOS + Android Submission	Simultaneous submission on July 14
Review Rejection Handling	Metadata rejections: fixed within 2 working days; Functional rejections: fixed within 5 working days
Official Launch	Target July 25, includes 11-day Apple review buffer (7/14–7/25)
Post-launch Maintenance + Bug Fixes	July 25 – August 11
Tech Docs + Complete Code Handover	August 11

B-4 Delay Clause Explanation

Circumstances Not Constituting Developer's Liability:

- App Store / Google Play review waiting times or platform rejection periods.
- Delays caused by the Client's failure to provide necessary resources, accounts, or access permissions on time.
- Delays in payment functions caused by failure to complete Stripe KYC verification on time.
- Delays in submission dates caused by Apple Developer Organization Account D-U-N-S Number issuance delays.
- Force majeure events (natural disasters, sudden changes in platform policies, etc.).

Conditions for Delay Compensation:

If functions remain incomplete due to reasons attributable to the Developer, and the milestone time is exceeded by more than 14 calendar days, the Client may calculate compensation according to the following formula. The compensation will only be calculated once during the formal delivery and acceptance of Track C, and will not accumulate across tracks:

Compensation Amount = Paid Amount × (Number of Incomplete Acceptance Items ÷ Total Acceptance Items in Appendix C) × 50%
Compensation Cap = 20% of the Paid Amount

Appendix B has the same legal effect as the Main Agreement (MTS-2026-001). The signing of the Main Agreement by both parties is deemed as confirmation of the contents of this Appendix.

Appendix C | Acceptance Criteria

Agreement No.: MTS-2026-001 Date: June 15, 2026

Parties: Motise Inc (Client) / HUANG CONG REN (Developer)

C-1 Acceptance Principles

C-1-1 Acceptance Structure

Acceptance is conducted in three tracks, each with an independent time window. Once a track passes acceptance, its items are locked and cannot be challenged in subsequent tracks.

Track	Scope	Development Period	Acceptance Period
Track A	Backend and Infrastructure	6/16 – 6/30	5 working days after completion
Track B	Frontend App and Web-based Admin	6/26 – 7/7	5 working days after completion
Track C	Launch and Production Environment	7/10 – 8/11	14 working days from the commencement date defined in Main Contract Clause 4.7

Acceptance Sign-off Document: This Appendix contains only the acceptance standards and item checklist. The acceptance sign-off fields for each track (including acceptance date, signatures of both parties, notes, etc.) are not included in this Appendix; they will be provided separately by the Developer as a standalone acceptance sign-off document after formal development begins, for both parties to sign track by track.

C-1-2 Acceptance Protection Clauses

- Acceptance standards rely on functional behavior.** Interface design must meet the minimum standards of written confirmed design drafts; if the Client does not provide UI/UX design source files by the deadline set in Appendix A, Section A-5 (before the kickoff of Track B), the Developer's own initial interface design shall serve as the interface acceptance baseline, and the Client may not reject delivery on the grounds that the interface appearance differs from designs it subsequently provides. Rejections based on subjective descriptions (e.g., "feels wrong") must be accompanied by specific functional issues; otherwise, they are deemed accepted.
- Failure to reply in writing implies acceptance.** Upon the expiration of the acceptance period for each track, if the Client fails to submit written acceptance results, the Developer shall issue a reminder notice; if the Client still fails to submit written acceptance results more than 3 working days after the reminder is delivered, all items in that track shall be deemed to have passed

acceptance.

3. **Weekly meeting confirmation mechanism.** If the Client does not raise written objections within 48 hours after a weekly sync, the stage progress is considered confirmed and cannot be challenged later.
4. **Track locking.** Once a track passes acceptance, it is locked and cannot be objected to during subsequent tracks or at formal delivery.
5. **New requests quoted separately.** New requirements raised during acceptance are excluded from the current scope and will be quoted separately for the next version.
6. **App Store / Google Play Rejection Handling:** Metadata rejections will receive a fixed version within 2 working days; functional rejections will receive a fixed version within 5 working days.
7. **Re-acceptance limits:** For the list of written modification suggestions submitted by the Client during the acceptance period, after the Developer completes the modifications, the Client can only perform re-acceptance on the modification results of the items originally listed in the list, and shall not propose new modification suggestions outside the original list during re-acceptance. The re-acceptance period is limited to 3 working days; upon the expiration of the re-acceptance period, if the Client fails to submit re-acceptance results, the Developer shall issue a reminder notice, and if the Client still fails to submit re-acceptance results more than 3 working days after the reminder is delivered, all items in the list shall be deemed to have passed re-acceptance.
8. **Regression Bug:** If the code changes made by the Developer to correct items in the current list directly cause new functional errors in other items within the same acceptance list, or in existing functions of items that have previously passed acceptance (subject to the standards of Section 1, with a clear explanation of the functional issue), the Client may raise them during the re-acceptance period together, free from the restriction of Section 7 "no new suggestions outside the original list" and without constituting a violation of Track Locking under Section 4. The Developer shall correct them together; for the additional correction time required, the re-acceptance period for that specific item may be extended by 3 working days, and the re-acceptance period for other items shall not be affected. The re-acceptance of regression bugs is strictly limited to confirming that the defect has been corrected, and no other new suggestions may be derived and proposed.

C-1-3 Technical Criteria and Stability Standards

1. **Technical Criteria for Determination:** Functional acceptance of each item shall be based on successful code compilation and operation, correct data return verified by API testing (e.g., Postman), or actual operational capability in a testing environment (e.g., Landing Page on a real browser, App on TestFlight), and "complete compliance with the corresponding Criteria description for that item in Appendix C" as the passing standard.
2. **System Stability Requirements:** The core functions and processes under acceptance must not contain blocker bugs or major defects that cause system crashes or freeze (Critical Bugs) during testing. Operational testing of the main flow must exhibit continuous running stability to be considered as passing the acceptance.

Nature: Independent preliminary work, unattached to any track. Locked upon passing, unaffected by subsequent tracks. **Deadline:** Within 3 working days after receipt of the first payment. **Acceptance Method:** The Client browses motise.net via browser to verify it operates normally.

#	Item	Criteria
P-01	Landing Page Launch	motise.net is browsable; page contains company name (Motise Inc), service overview, contact info; layout meets Apple Developer org review standards

Layout Notes: Final layout is determined by the Developer based on review needs. The Client may provide brand assets (Logo, brand colors, copy) for reference, but it is not mandatory. Post-delivery layout or content modifications are not covered by this Agreement.

C-3 Track A Acceptance | Backend and Infrastructure

Development Period: 2026/06/16 – 2026/06/30 **Method:** API Documentation + Postman Test Report. The Client does not operate an interface; Developer provides test results for confirmation.

#	Item	Criteria
A-01	DB Schema	5 core tables (courses, users, bookings, orders, attendance) created matching Appendix A. Method: ER Diagram or screenshot
A-02	AWS Lightsail Env	Node.js Instance + PostgreSQL built. Method: Client logs into AWS Console to verify resources
A-03	Auth API	Email reg/login, Google OAuth, Apple Sign-In (JWT), phone binding callable. Method: Postman report (200 OK)
A-04	Role Permissions	Teacher/Student/Admin have correct access; cross-role returns 403. Method: Postman report
A-05	Course CRUD API	Create, read, update, unlist APIs work. Capacity and deadlines stored correctly
A-06	Booking Logic API	Concurrent capacity locking works; booking past deadline returns correct error
A-07	Stripe Payment Intent	Backend API generates Payment Intent and returns client_secret. Method: Stripe Test Mode / Postman
A-08	Stripe Webhook	Successful payment event updates order status. Method: Stripe CLI webhook trigger

#	Item	Criteria
A-09	QR Code Gen API	Purchased users get a unique token bound to course/ account; expires 15 mins after start
A-10	QR Code Verify API	Teacher calling verification marks attendance; duplicates show "Already Checked-in"; invalid tokens error
A-11	Track A Technical Documentation	Provide draft API documentation and database Schema description documents covering the completed modules of Track A, matching the specifications of Section A-3-9 of Appendix A

⚠️ **Stripe Prerequisite:** Client must start Stripe KYC within 3 working days of the first payment. Delays here will postpone A-07/A-08 acceptance without triggering Developer delay penalties.

C-4 Track B Acceptance | Frontend App and Web Admin

Development Period: 2026/06/26 – 2026/07/07 **Method:** Real-device testing via TestFlight (iOS) + Firebase Distribution (Android). The Client operates the full flow.

Authentication

#	Item	Criteria
B-01	Email Login	Reg, login, logout work; wrong password shows error
B-02	Google/Apple Login	Auth page pops up, successful entry; Apple supports Face ID / Touch ID
B-03	Phone Binding	Settings page allows phone binding, shows success status
B-04	Role Interface	Student sees Student UI; Teacher sees Teacher UI

Course Features

#	Item	Criteria
B-05	Course List	Shows listed courses (name, time, price, slots). Test: List 3 courses via admin
B-06	Course Detail	Full descriptions, time, location, slots, instructor profile
B-07	Capacity Limits	Booking button disabled when full. Test: Set slot=1, verify 2nd user fails
B-08	Booking Deadline	Button disables after deadline
B-09	My Courses	Booked, Purchased, History display correctly; QR Code viewable

Stripe Payments

#	Item	Criteria
B-10	Payment Flow	Credit card payment marks course "Purchased". Test: Stripe 4242 4242 4242 4242
B-11	Payment Failure	Failed cards show error, course unlocked. Test: Stripe 4000 0000 0000 0002
B-12	Duplicate Prevention	Buy button disappears for purchased courses
B-13	Order Sync	Admin panel shows updated order and payment status immediately

QR Code Check-in

#	Item	Criteria
B-14	QR Code Display	Valid QR Code shown with expiration warning and "Personal use only" notice
B-15	QR Code Expiration	Invalidates 15 mins after course start. Test: Set start to +16 mins, verify failure
B-16	Teacher Scan	Camera scan shows info, confirms attendance
B-17	Duplicate Scan Guard	Scanning an used QR Code shows "Already Checked-in"
B-18	Invalid QR Handling	Invalid tokens show clear error messages

Admin Panel (Web-based)

#	Item	Criteria
B-19	Course Management	Add, modify, list, unlist courses; reflects on frontend instantly
B-20	Member Management	Query members, assign/remove Teacher roles, deactivate
B-21	Order Inquiry	Search orders by student, course, status, amount
B-22	Attendance Records	View attendance lists and check-in statuses
B-23	Track B Technical Documentation	Provide interface description documentation for the frontend App and Web-based backend, and draft setup instructions for third-party services (Firebase), matching the specifications of Section A-3-9 of Appendix A

C-5 Track C Acceptance | Launch and Production

Development Period: 2026/07/10 – 2026/08/11 **Method:** Final validation using the official release App (Target acceptance start: July 25). **Acceptance Period:** 14 working days

from the commencement date defined in Main Contract Clause 4.7 (the date the Developer delivers for testing or the platform review is approved, whichever occurs first); "official launch" is not the sole commencement point of the acceptance period.

Platform Review Buffer and Acceptance Payment Trigger Instructions (in accordance with Sections 4.7.1 and 4.7.2 of the Main Agreement):

If the App cannot be officially published on the App Store or Google Play due to the following reasons not attributable to the Developer, the start date of the acceptance period shall be adjusted as follows:

- The Client fails to provide a valid Apple / Google Developer account in a timely manner.
- The Client explicitly requests to postpone launch.
- Platform rejection not caused by defects in the App code (administrative rejection, queue delays, etc.).

Under the above circumstances, a buffer period of 14 working days starting from the date the Developer delivers the complete TestFlight (or equivalent testing environment) and submits it for review to both platforms shall be granted. During the buffer period, if the App is rejected by the platform due to App code defects or technical non-compliance with the specifications of Appendix A, the Developer shall correct it free of charge and resubmit it, and the buffer period shall not be recalculated.

Track C acceptance shall be established upon the earliest occurrence of any of the following circumstances, which shall serve as the starting date for the payment instruction of the third installment (final payment):

- The App completes official launch on both iOS and Android platforms;
- Both parties hold an online acceptance meeting, complete real-device functional testing for the Track C items in this section, and confirm approval. The payment instruction shall be issued on the day of the meeting or within the next working day;
- From the day following the expiration of the buffer period mentioned in the preceding paragraph, the acceptance period calculated in accordance with Section 3.2 of the Main Agreement expires, and the Client does not raise written objections, which shall be deemed as passing acceptance.

Code Defect Warranty: After the Client pays the final installment, if the App's subsequent official launch process is functionally rejected (Functional Rejection) by the platforms due to defects in the original source code delivered this time, the Developer is obligated to fix the code free of charge until review approval within 60 calendar days after the final payment is made. Bugs or crashes affecting the normal operation of the core functions set out in this Appendix shall be fixed before each track passes acceptance; such

issues discovered after formal delivery acceptance is completed shall be handled under the maintenance services of Section D-5.6 of Appendix D (if Appendix D is not in effect or there is no corresponding SOW, they shall be quoted separately under Section 1.3 of the Main Agreement).

Major Platform Policy Changes: If a functional rejection occurs due to a sudden and major change in platform policies, the Developer will assist free of charge if the modification takes 12 hours or less; for the portion exceeding 12 hours, or for changes occurring after formal delivery acceptance is completed, both parties shall negotiate compensation separately.

#	Item	Criteria
C-01	App Store Launch	Passed Apple review, downloadable on App Store
C-02	Google Play Launch	Passed Google review, downloadable on Google Play
C-03	Course Reminders	Push notifications received 24h & 1h prior; toggles work. Test: Send test push
C-04	Rush Alerts	"Set Alert" triggers push before booking opens. Test: Limited-time course alert
C-05	AWS Production	Node.js + DB deployed fully on AWS. Method: Console access validation
C-06	Privacy & Consent	First launch demands privacy policy consent; link works
C-07	Purchase Terms	Cancellation policy shown; must check box to pay. Refund UI not in v1.0
C-08	Stability Check	Browse → Book → Pay → Check-in runs 3 times without crash (Stripe Live Mode)
C-09	Docs Handover	Complete technical documentation including: Deployment Guide (comprising local environment build, AWS deployment steps, environment variables and third- party service settings, and packaging/publishing instructions), System Architecture Documentation (comprising database Schema, API documentation, and technical architecture description for each module), and System Handover Documentation, matching the specifications of Section A-3-9 of Appendix A

#	Item	Criteria
C-10	AWS Environment Handover	AWS Lightsail Production environment access and ownership transferred to the Client within 3 working days after the settlement of the third installment in accordance with Section 5.5 of the Main Agreement, with a README explaining the deployment process; the GitHub Repository is created under the Client's account from the beginning, and the survival of the Developer's Admin permissions shall be handled in accordance with Section 5.4.1 of the Main Agreement
C-11	Privacy Policy & Terms of Service Embedding	Privacy Policy and Terms of Service have been fully embedded and deployed in the corresponding sections of the Landing Page and the App according to the version confirmed in writing by both parties; links open normally, and the content matches the version confirmed by both parties.

⚠ App Store and Google Play review times are outside Developer's control. Delays non-attributable to code issues will not count as Developer failure. Functional rejections will be fixed until approved.

C-6 Overall Acceptance Summary

Item	Number of Acceptance Criteria
Preliminary (Landing Page)	1
Track A	11
Track B	23
Track C	11
Total	46

Appendix C has the same legal effect as the Main Agreement (MTS-2026-001). The signing of the Main Agreement by both parties is deemed as confirmation of the contents of this Appendix.

Appendix D | Long-Term Collaboration Framework Agreement

Agreement No.: MTS-2026-001-LT Effective Date: August 11, 2026 Expiration Date: August 11, 2027 (12 months) Date: June 15, 2026

Parties: Motise Inc. (Client) / HUANG CONG REN (Developer)

D-1 Form of Collaboration and Purpose

Both parties agree to conduct long-term collaboration on a "project-based renewal" basis.

This Appendix does not constitute any commitment to fixed working hours, fixed monthly fees, or continuous services. Each subsequent project must have its scope, schedule, and compensation separately defined and confirmed in writing through an independent Statement of Work (hereinafter referred to as "SOW").

The signing of this Appendix serves as the written basis for the establishment of the discount conditions of Scenario 1 (Total Fee \$1,800 USD) under the Main Agreement.

D-2 Period and Cycles of Collaboration

Collaboration Period: August 11, 2026 to August 11, 2027, totaling 12 months.

The Collaboration Period is equally divided into four outsourcing cycles, as follows:

Cycle	Start Date	End Date
Cycle 1	2026/08/11	2026/11/11
Cycle 2	2026/11/11	2027/02/11
Cycle 3	2027/02/11	2027/05/11
Cycle 4	2027/05/11	2027/08/11

D-3 Minimum Outsourcing Obligation and Difference Make-Up Mechanism

3.1 Within each outsourcing cycle, the Client must complete the written signing of at least one SOW by both parties (signing is deemed as fulfillment, and does not require the Developer to

have actually commenced work).

3.2 If the Client fails to complete the written signing of any SOW before the deadline of a certain outsourcing cycle, such cycle shall be deemed "unfulfilled," and the Client must pay the difference make-up amount for that cycle within 10 working days after the cycle's deadline:

Difference make-up amount per cycle = \$699 USD ÷ 4 = \$174.75 USD
(rounded to \$175 USD)

If the failure to sign a SOW during a cycle is due to the Developer's reasons (such as explicit refusal to accept the project, failure to provide a quotation within the timeframe specified in Section D-4 Step 2, or the Developer's compensation quotation exceeding the rate cap specified in Section D-5.4 leading to a failure to reach a consensus), the Client is not required to pay the difference make-up amount for that cycle. However, if the Developer has proposed a quotation within the rate cap under Section D-5.4, and the parties still fail to sign a SOW due to a lack of consensus on compensation or schedule details, the aforementioned exemption shall not apply, and the cycle shall still be deemed unfulfilled in accordance with this Section.

3.3 The payment method and fee allocation for the difference make-up amount shall be handled in accordance with Section 4.5 of the Main Agreement.

3.4 The difference make-up payment does not affect the rights and obligations of both parties to continue cooperation in subsequent cycles. Each cycle is calculated independently and is not cumulative.

3.5 If the minimum outsourcing obligation is fulfilled in all four cycles, the difference make-up mechanism will not be triggered throughout the process, and the Scenario 1 discount under the Main Agreement shall remain fully valid.

D-4 Project Initiation Workflow

Each subsequent project shall be initiated in accordance with the following workflow. Prior to the completion of all steps, the Developer is under no obligation to commence any work:

Step 1 | Requirement Submission The Client submits the new project requirements in writing, including functional descriptions and expected timelines.

Step 2 | Evaluation and Quotation The Developer shall provide a scope statement, schedule estimation, and compensation quotation within 5 working days after receiving the requirements. If the Developer fails to provide a quotation within the aforementioned timeframe, the deadline of the outsourcing cycle shall be automatically extended by one day for each day overdue.

Step 3 | SOW Confirmation After both parties reach a consensus on the Step 2 quotation, a formal SOW shall be signed. The SOW must include: project scope, list of deliverables, schedule, compensation amount, and payment structure.

Step 4 | Kickoff Upon the completion of signing the SOW by both parties, the Developer shall formally commence work.

D-5 Compensation Principles

5.1 The compensation for each project shall be independently negotiated in the SOW based on the actual scope, unaffected by the fee structure of the Main Agreement, and free from any restrictions under this Appendix.

5.2 The payment structure of each SOW shall be executed with reference to the three-installment model (30/30/40) of the Main Agreement or another method mutually agreed upon by both parties.

5.3 The conditions for transferring code ownership in each SOW shall be executed with reference to the staged transfer logic of Article 5 of the Main Agreement.

5.4 This Appendix does not lock in any specific rates, and the Developer reserves the right to quote independently for each SOW. However, both parties agree that the estimated developer Man-Day Rate or hourly rate for each subsequent SOW shall refer to the international remote outsourcing market conditions for equivalent technology stacks (React Native + Node.js full-stack development), with USD 50–60 / hour (equivalent to USD 400–480 / 8-hour working day) as the rate cap baseline (hereinafter referred to as the "Rate Cap"), or as otherwise negotiated by the parties when initiating the requirement. The quotation of Scenario 1 under the Main Agreement reflects a promotional discount for establishing a cooperative relationship, is not a market-rate fee, and shall not serve as the basis for calculating the aforementioned Rate Cap.

5.5 In principle, the compensation of each SOW shall be negotiated and paid on a fixed total price basis based on deliverables or project stages (milestones), and both parties do not need to break down or disclose the calculation process of working hours and rate details in the SOW. The Rate Cap in the preceding section serves solely as an internal reference for both parties when negotiating compensation.

5.6 **Maintenance-Only Services:** If, during a certain outsourcing cycle, the Client only requires the operation and maintenance of the existing system without new feature development, both parties may separately agree on a "Maintenance Service Fee" through a SOW.

5.6 .1 **In-Scope Maintenance:** Limited to the "scope of an engineer's responsibilities," referring to maintenance work arising from the following technical reasons with respect to the existing

source code already accepted and delivered under the MTS-2026-001 Main Agreement:

- (a) Defect fixes and hotfixes for existing code caused by traffic, load growth, performance bottlenecks, or concurrency;
- (b) Compatibility patches for existing code that fails due to changes in third-party services, operating systems, SDKs, or runtime environments;
- (c) Security vulnerability patches;
- (d) Version updates of third-party services or packages;
- (e) Lightweight configuration adjustments not involving functional or architectural changes.

The above items do not include items within the warranty scope defined in Section 4.7.3 that the Developer must fix free of charge (the warranty scope is determined by the main text of Section 4.7.3, limited to the specific situation within 60 calendar days after the final payment where the App's subsequent re-launch process is functionally rejected by the platform, and does not extend to general issues discovered after formal acceptance is completed).

5.6 .2 Out-of-Scope Maintenance: The following items are not covered by this Maintenance Service Fee and must be separately negotiated under a SOW or the D-5.4 rate:

- (a) All business operations, including but not limited to: operating the backend on the Client's behalf, listing/unlisting and inputting courses/content, order and accounting processing, customer service, marketing or campaign setup, data import/export, and other non-engineering daily operational work;
- (b) Any new feature development, behavioral changes to existing features, or UI/UX redesign;
- (c) Scope changes as defined in Section 1.3 of the Main Agreement;
- (d) Troubleshooting of issues caused by the Client or third-party personnel modifying the code, configuration, or data themselves;
- (e) Charges by third-party platforms, services, or infrastructure themselves (such as fees or usage charges of AWS, Stripe, Apple, Google, etc.).

5.6 .3 Billing and Working Hours:

- The Maintenance Service Fee is billed monthly at a fixed amount of USD \$500 per month, covering up to 12 hours of maintenance work within the scope of 5.6.1 per month.
- The portion of monthly maintenance work exceeding 12 hours, or work requested by the Client within the scope of 5.6.2, shall be separately billed at the D-5.4 rate cap baseline and executed after the Client's prior written consent.
- Unused monthly hours do not carry over to the next month and are not convertible to cash.
- Signing a maintenance service SOW still counts toward the D-3 minimum outsourcing obligation for that cycle.

D-6 Non-Exclusivity Statement

6.1 The Developer reserves the right to accept projects from other clients during the collaboration period, free from any restrictions under this Appendix.

6.2 The Client reserves the right to evaluate other development resources during the collaboration period, but the minimum outsourcing obligation (Section D-3) must still be fulfilled.

D-7 Termination

7.1 The Client or the Developer may terminate this Appendix upon 21 calendar days' prior written notice during the collaboration period.

7.2 If there is an ongoing SOW when the termination notice is issued, such SOW shall continue to be executed until completion in accordance with its own terms, unaffected by the termination notice.

7.3 If this Appendix is terminated early under Section 7.1, for each of the four cycles of the original collaboration period in which the written signing of a SOW was not completed (whether overdue and unsigned before the termination date, or a cycle not started due to termination), a long-term collaboration discount refund of \$175 USD per cycle (calculated on the same basis as D-3.2: $\$699 \text{ USD} \div 4$) shall be paid as a proportional adjustment of the Scenario 1 discount, to be settled together within 10 working days after the termination date. Cycles with a signed SOW are not subject to this Section. For any cycle for which the differential top-up payment has already been paid under Section D-3.2, that cycle shall not be charged again under this Section; the differential top-up already paid shall be deemed to have satisfied the refund obligation under this Section.

7.4 If the Developer terminates this Appendix early under Section 7.1, the discount refund in the preceding section shall apply only to cycles already deemed unfulfilled before the termination date; cycles not yet started after the termination date shall not be subject to the discount refund in the preceding section, nor shall the minimum outsourcing obligation be calculated for them any longer.

7.5 If the Developer terminates this Appendix early in accordance with Section 7.1, within 30 calendar days from the effective date of termination (handover warranty period), the Developer shall cooperate to provide handover of existing project documentation, knowledge transfer, and technical support to assist the Client in transitioning to subsequent development resources.

7.6 Regardless of the reason for the conclusion of this Appendix or individual SOWs (including but not limited to: expiration or termination of this Appendix, completion of individual SOWs without subsequent SOWs signed, or failure to establish a SOW due to lack of consensus on compensation), the Developer shall deliver the latest version of the source code, relevant database structure (Schema) descriptions, and technical documentation matching the specifications of Section A-3-9 of Appendix A under each paid and accepted SOW to the Client

within 5 working days from the date the cooperation relationship ends, and provide up to 2 hours of online handover description free of charge; the scope of handover shall be limited to the aforementioned paid and accepted deliverables. For work in progress (WIP) that has not yet been paid or passed acceptance, the ownership and delivery of its intellectual property rights shall be handled in accordance with the terms of each SOW and the staged transfer logic of Article 5 of the Main Agreement.

D-8 Relationship with the Main Agreement

8.1 This Appendix has the same legal effect as the Main Agreement (MTS-2026-001), and all terms of the Main Agreement shall apply within the scope of cooperation under this Appendix.

8.2 If this Appendix is not signed in writing by both parties concurrently with the electronic signing of the Main Agreement, the Main Agreement shall automatically apply Scenario 2 (Total Fee \$2,499 USD), and this Appendix shall be deemed invalid.

8.3 This Appendix is governed by the laws of the Republic of China (Taiwan).

D-9 Signatures of Both Parties

Both parties have read and understood all terms of this Appendix and agree to be bound by them.

This Appendix, together with the Main Agreement (MTS-2026-001) and Appendices A, B, and C, consists of five documents. Both parties shall each hold one electronic copy, which shall have equal validity.

Schedule 1 | Cycle 1 SOW Plan (App 2.0 Paid Video Feature)

Note: This Schedule sets out the planned SOW scope and quotation basis for Cycle 1 of Appendix D (2026/08/11–2026/11/11). It takes effect upon completion of the written signing of the corresponding SOW by both parties in accordance with the workflow of Section D-4; the final scope, compensation, and details shall be subject to the formal SOW signed by both parties. The signing of this Schedule does not affect the scenario determination of the Main Agreement, nor does it replace the determination of the minimum outsourcing obligation under Section D-3.

S1-1 Project Objective

To add a "paid online video" feature and Apple Pay payment to v1.0 of the System. Video hosting uses the third-party service Cloudflare Stream to reduce the development effort and platform-review risk of self-built transcoding/streaming; compensation is billed on a milestone-based fixed total price under Section D-5.5, and both parties do not need to break down working hours.

S1-2 Development Scope (Two Phases by Submission Strategy)

To accommodate the Client's expectation of completion within approximately 2 months, and to prevent backend development from slowing the App submission pace, the scope of this SOW is divided into two phases; **Phase 1 is the critical path for Apple/Google review and is prioritized for completion and submission; Phase 2 (backend) is developed in parallel after the submission is filed and does not affect the review process.**

Phase 1 (Review Critical Path, Prioritized for Submission):

1. Cloudflare Stream hosting integration
2. Stripe Apple Pay API integration
3. Student paid unlock and viewing access control
4. Student-side player (including viewing progress)

Phase 2 (Backend, Parallel After Submission):

5. Admin video upload
6. Video catalog and backend management

S1-3 Milestones and Payment

Fixed total price **USD \$3,500**, paid in installments with reference to the three-installment model of the Main Agreement under Section D-5.2, upon delivery and acceptance of each milestone:

Milestone	Deliverables	Ratio	Amount
M1	Cloudflare Stream hosting integration + Stripe Apple Pay API integration, build completed and accepted	30%	\$1,050 USD
M2	Student paid unlock + viewing access control + student-side player (with progress) accepted, reaching "ready-to-submit" status, and the Developer has completed the submission filing to App Store/Google Play	30%	\$1,050 USD
M3	Admin video upload + video catalog and backend management completed and accepted (developed in parallel after submission, not affecting review)	40%	\$1,400 USD
Total		100%	\$3,500 USD

S1-3.1 Responsibility Boundary for Submission and Launch: The payment trigger for M2 is the Developer's "completion of the submission filing," **not Apple/Google's actual approval or launch**. The timing of the App's approval and launch is determined by the platform review mechanism and is beyond the Developer's control; launch delays caused by review queues, supplementary-material requests, or policy-based rejections shall not be deemed a Developer delay, nor shall they affect the M2 payment. Corrections for functional rejections shall be handled under Sections 4.7.1/4.7.2 of the Main Agreement and Point 6 of Appendix C, C-1-2.

S1-3.2 Apple Pay Prerequisites: The activation of the Stripe Apple Pay API depends on the Merchant ID/certificate setup of the Client's Apple Developer account (the Client already completed D-U-N-S and organization account activation for v1.0, so no re-application is required). If the Client does not complete the Merchant ID/certificate setup in a timely manner, the acceptance of Apple Pay-related items within M1 shall be postponed and shall not be deemed a Developer delay (following the Stripe postponement logic of Appendix C, A-08).

S1-3.3 Target Schedule (Not a Hard Delivery Deadline): The target is to start the build

on 2026/08/11, with Phase 1 (M1–M2) completing testing and submission around early September 2026; Phase 2 (M3) proceeds in parallel after submission. The foregoing is a planning target; actual milestone dates shall be subject to the formal SOW; postponements caused by the Client's late provision of resources or by review delays shall be handled under the corresponding provisions.

S1-3.4 Confirmation of Responsibility Boundaries: The submission/launch responsibility boundaries, Apple Pay prerequisite postponement, and the "target schedule is not a hard delivery deadline" nature defined in Sections S1-3.1 through S1-3.3 are core premises of this Schedule's quotation (USD \$3,500). The Client's signing of the formal SOW corresponding to this Schedule shall be deemed acceptance of the above responsibility boundaries and schedule nature; the terms of the formal SOW shall not conflict with the foregoing principles. If the Client objects, it shall raise such objection in writing during the D-4 quotation negotiation stage; failure to do so shall be presumed as acceptance.

The aforementioned compensation already includes **3 months of basic maintenance after the acceptance of the final milestone (M3)**, with the maintenance scope handled under Section D-5.6 (In-Scope / Out-of-Scope / Billing); the maintenance period shall not begin early merely because Phase 1 is delivered first.

S1-4 Cloud Usage Fees (OpEx, Billed Separately)

Cloudflare Stream storage at approximately USD \$5 / 1,000 minutes, streaming at approximately USD \$1 / 1,000 minutes, and S3 original file storage fees, estimated at approximately USD \$10–40 per month, calculated based on actual usage and borne by the Client, are not included in the fixed total price of the preceding section.

S1-5 Exclusions from This Cycle

The upload of student user-generated (UGC) practice videos, and the related content review, reporting, takedown, and DMCA handling processes, are deferred to a subsequent SOW cycle for separate evaluation and quotation due to higher legal risk and operational costs.

S1-6 Miscellaneous

Matters not addressed in this Schedule (including the staged transfer of code intellectual property rights, acceptance mechanism, termination settlement, etc.) shall be handled in accordance with the corresponding provisions of Appendix D and the Main Agreement.
